

**UNCARVED BLOCK  
CLIMBING HOLDS**  
SINCE 1996

# Cleaning & Maintenance

## Materials

Climbing Holds: Uncarved Block Climbing Holds are made of polyurethane.

Washers: Washers included inside the climbing holds are zinc plated steel.

## Maintenance

Climbing Holds: Polyurethane requires very little maintenance. With use, the texture of the climbing holds will become smooth. The speed at which this occurs depends on many variables and the time period can be 3 - 10+ years. The result of the texture becoming smooth is the holds become more challenging to users.

Cleaning: Can be cleaned with a gerni as required for aesthetic or hygienic reasons.

**Installation Note:** As the climbing holds were not installed by Uncarved Block Pty Ltd, it is recommended the fasteners used to attach the holds to the structure should be checked for tightness and condition as deemed necessary.
